

Non-custodial pooled prediction markets
protocol-as-a-service

TOKENOMICS

DoubleDice Mission

Enabling creator economy in predictions/gaming space by providing the tech-stack allowing users to easily create “Virtual floors (VFs)” denoting any prediction market or gaming.

Remove the role of centralized parties in prediction markets and gaming (e.g., casinos and bookies) allowing users to create their VFs in a no-risk, player-only, pooled setup.

Create fair gaming by delivering unprecedented risk-reward paradigm to the participants of the VFs

About DoubleDice

DoubleDice is a non-custodial pooled prediction markets protocol-as-a-service. Users utilize the plug-and play turnkey tech-stack to own, promote and run Virtual Floors (VFs) deployed e.g., as pooled predictions or gaming rooms (e.g., sports, card games, casino games, dice games, political outcomes, etc.). Token holders’ access to the utility by participating in staking programs. Players can make predictions within the “Virtual Floors” in a “player only” environment without going against a house or casino.

DoubleDice does not create any markets, products or VFs where players engage.

Token purpose

The DoubleDice token (DODI) gives its holders the utility derived from the multi-party settlement protocols and proprietary algorithms for true-probability-based risk-reward algorithms that govern the payouts. This primary utility is extracted through staking mechanisms (akin to a virtual node) made available to the community as seen on token.doubledice.com. A secondary staking program, denoted or Lazyool, is also available to DODI holders where they can participate in virtual service provision for the virtual node owners thereby allowing them to earn a portion of the node fees (charged as a % of the pooled prediction markets).

The token holders will also be able to vote on community proposals and related decisions that are put forward from time to time.

The DoubleDice token contract address: `0x4E08F03079c5CD3083eA331Ec61bCC87538B7665`
(listed on UniSwap and BitMart)

Dual Token system

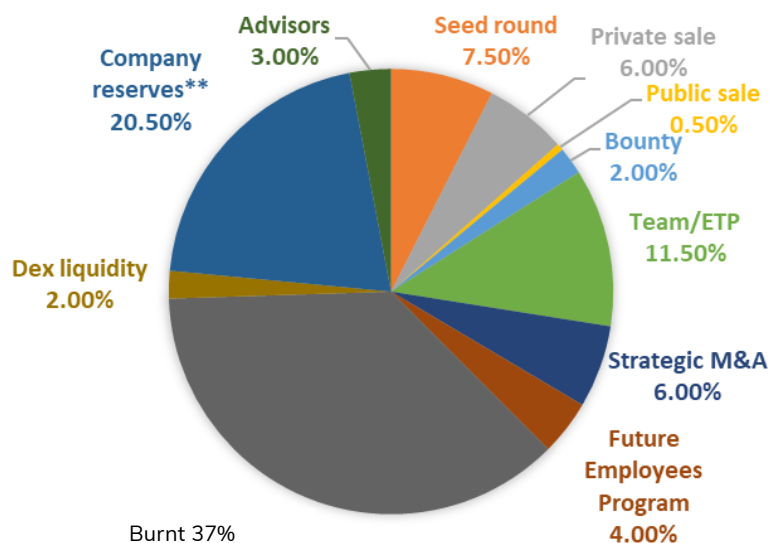

DODI will serve as a governance / utility token with the purpose as described above. DODI is not meant to be a hybrid token which is both a payments token and a utility token. The users will use a stable-coin or whitelisted ERC-20 tokens for participating in the prediction markets.

Token allocation

Total DODI supply 6.3bn tokens

3.7bn tokens to be burnt

Token price and vesting timeline

- The 7.5% seed tokens (\$0.002/token), vest 17.5% at TGE + 8.25% p.m. for 10 months
- The 6% Private sale tokens (\$0.0025/token), vest 20% on TGE + 10% p.m. for 8 months
- The 0.5% Public sale tokens (\$0.005), vest 100% at TGE
- The 11.5% team tokens vest 10% on release of the platform then 7.5% every month
- The 3% for Advisors will only be used if and as needed, else will be turned into Company reserves
- The 4% for Future Employees Program will be locked at TGE for 6 months and then unlocked only as required for onboarding future employees.
- The 2% for Dex liquidity will be unlocked on TGE for liquidity on decentralized exchanges.
- The 6% strategic reserves are for tech buy-outs and potential M&A
- The 2% for Bounty will be locked on TGE and only distributed for bounties leading up to the release of the platform.
- The 37% tokens will be burnt based on platform milestones (an annualized gaming-yield of over \$30m per year) reducing the overall supply of tokens from 10bn to 6.3bn
- The 20.5% Company reserves are for any further funding needs.
- DoubleDice token burn would imply an indirectly higher percentage holdings for the other token holding groups.
